

Three records have been recorded in |VC62 two in Guisborough 20 April 2004. 01 September 2004 and one in Normanby 21st June 2007. It is not quite clear as to the origins of these butterflies as the food plant Buckthorn *Rhamnus catharticus* is not evident. However reports have been made that this species will lay on dock; successfully or not is another question. It's possible these records may be captive breed, however this cannot be substantiated.
